George Arubi

Full Stack Software Engineer

arubigeorge0@gmail.com

SKILLS

Languages & Frameworks: TypeScript, Python, React, Node.js, Django, GraphQL, REST, tRPC, SQL, NoSQL.

Tools & Platforms: AWS, Google Cloud, Docker, Figma, CI/CD Pipelines.
Development Practices: UI/UX Design, Agile, DevOps, Modern Full Stack Architecture.

EXPERIENCE

Patchbay, New York, NY - *Software Engineer*

JAN 2025 - PRESENT

- Delivered a scalable, public-facing microsite platform (Next.js + internal microservices) that enables teams and artists to securely share data with external partners.
- Led improvements to Patchbay's album release workflow—enabling clearer planning, smoother collaboration, and streamlined asset management for label teams.

Rollout, New York, NY - *Founding Engineer*

NOV 2023 - NOV 2024

- Spearheaded the development of a task management/enterprise resource planning app for labels and artist managers, built with Next.js, TypeScript, Jest, Vercel, tRPC, and MongoDB.
- Designed and implemented an AI-driven task recommendation system using music metadata from Spotify and Chartmetric.

Musicbuk, Atlanta, GA - *Full Stack Engineer*

SEP 2022 - APR 2023

- Led the redesign & development of a scalable, component-based admin console (B2B SaaS) with Vue, Figma, and Google Cloud, driving UX and monthly generated revenue by 20%
- Led project management efforts for the engineering team, driving technical decision-making, and ensuring successful MVP launch.

AudioShake, San Francisco, CA - *Software Engineer Intern*

FEB 2022 - MAY 2022

- Built a client-facing tool for the mass separation of music stems using Node.js, TypeScript, AWS Lambda, S3, and Uppy.js.
- Delivered a stem separation widget as part of Audioshake's developer tooling using Node.js, HTML, CSS, and AWS.

EDUCATION

M.S. in Information Technology, Software Engineering

Graduation Date - May 2022

Marymount University, Arlington, VA

B.S. in Information Technology, Computer Science

Graduation Date - May 2019

Marymount University, Arlington, VA

PROJECTS

FanSync – Measure of Music Hackathon

Collaborated with a small team to build a fan engagement platform empowering artists with data ownership via React, TypeScript, Firebase, MongoDB, Vercel, and Figma.

Everyone's Radio – Grad Dissertation

Developed a playlist recommendation app to bridge AI and music technology; featuring generative AI-powered Spotify playlists and a machine learning model.
